

- HIGH EFFICIENCY DRIVERS •
- UP TO 45 W (MAX. POWER) •
- WIDE OPENING ANGLE •
- EXCELLENT SPEECH REPRODUCTION •
- SIMPLE POWER SETTING •
- WATER- AND DUST PROTECTED TO IP 65 •
- VERSATILE MOUNTING BRACKET •
- COMPLY WITH INTERNATIONAL INSTALLATION AND SAFETY REGULATIONS •

Philips high-efficiency horn loudspeakers provide excellent speech reproduction and sound distribution for a wide scope of outdoor applications. They are ideal for sports grounds, parks, exhibitions, factories and swimming pools.

15, 30 and 45 W models

There are two 15 W (max. power) models in the range. The LBC 3481/12 is circular horn loudspeaker and the LBC 3491/12 is a rectangular model. The 30 W (max. power) LBC 3492/12 and the 45 W (max. power) LBC 3493/12 are both circular loudspeakers with large horns measuring 354 mm and 400 mm in diameter respectively. All four models are for direct connection to a 100 V line output.

The LBC 3481/12 and LBC 3491/12 are made from ABS, the LBC 3492/12 and LBC 3493/12 are made from a combination of aluminium with ABS for optimum strength and low weight. The edges of the horns of the LBC 3492/12 and LBC 3493/12 are covered with a PVC profile for protection against impact damage. All four

HORN LOUDSPEAKERS

models are finished in light grey (RAL 7035). The horns are water and dust protected.

Simple power setting

The horn loudspeakers include a 100 V transformer with taps on the primary winding to allow different power settings. Nominal full-power, half-power or quarter-power radiation (i.e. in 3 dB steps) can easily be selected by connecting the amplifier output to the appropriate tap. A two metre long four-core cable is fitted to the horns. Each core is a different colour, and is connected to one of the primary taps on the transformer.

Mounting

The horn loudspeakers are supplied complete with sturdy adjustable mounting brackets, allowing the sound beam to be accurately directed.

Quality Assurance

All Philips loudspeakers are designed to withstand operating at their rated power for 100 hours in

accordance with IEC 268-5 Power Handling Capacity (PHC) standards. Philips has also developed the Simulated Acoustical Feedback Exposure (SAFE) test to demonstrate that they can withstand two times their rated power for short durations. This ensures extra reliability under extreme conditions, leading to higher customer satisfaction, longer operating life, and much less chance of failure or performance deterioration.

Safety aspects

All ABS parts are self-extinguishing (according to UL94V0). In common with all Philips products, care is taken to meet high safety standards. They comply with the relevant safety and installation regulations of EN 60065.
