

Our focus is making professional video surveillance easy for everyone

Safe data storage and excellent usability.

BOSCH

Invented for life

With the DIVAR IP 5000 storage device it is now possible to equip a small or medium business with the most professional and user-friendly video surveillance solution in no time. Even the maintenance is hassle-free, because the DIVAR IP 5000 and the Bosch IP cameras can be updated remotely.

Out-of-the box installation in just three steps!

Installers can get to work instantly. There's no need to be an IP specialist; after the cameras have been mounted, the system can be up and running in about 15 minutes. All that's needed is a tablet or notebook to complete the installation. Our set-up wizard will provide step by step guidance for easy installation.

1

Install the cameras

- Up to 32 cameras

2

Connect the DIVAR IP 5000

- Can be placed anywhere - even in a reinforced cabinet or safe - thanks to compact, stylish design

3

Set-up and configure with our web-based wizard

- Go through the installation process with your smartphone, tablet or pc
- Up and running in 15 minutes

Complete access and control from anywhere at any time

You can't be everywhere all the time. That's why the DIVAR IP 5000 has Dynamic Transcoding technology. It offers instant access to smooth live video streams or high resolution images up to 12 megapixel from a mobile device, regardless of available bandwidth. So there's no need to connect a keyboard or monitor to the DIVAR IP 5000.

Together with the free Video Security App or Video Security Client, it allows you to control cameras or retrieve the right data quickly from stored video. Viewing clients allow specific footage to be shown instantly in a given time frame. Video Security Client supports up to 8 different time frames per viewing window, giving you the ultimate freedom and flexibility to monitor a facility from anywhere at any time.

Video Security Client

- Intuitive control via touch screen or mouse and keyboard operation
- Supports: desktops, 2-in-1 laptops and mobile devices running Windows 7, 8 and 10
- Up to 32 channels
- 24/7 access to smooth live video streaming and up to 12 megapixel images, regardless of bandwidth
- Simultaneously view multiple cameras
- Video analytics support: line crossing, object in field, any motion

Video Security App

- Intuitive user interface
- Supports: iOS and Android mobile devices
- Up to 32 channels, if connected to the DIP 5000
- 24/7 access to smooth live video streaming and up to 12 megapixel images, regardless of bandwidth
- Video analytics support: line crossing, object in field, any motion

Dynamic Transcoding technology

Automatically tailors the high resolution video stream to the available bandwidth without compromising video quality. It retains information, such as original resolution and frame rate, regardless of bandwidth. The DIVAR IP 5000 also supports up to 4 parallel transcoder sessions.

DIVAR IP 5000

Dynamic Transcoding up to 12 megapixel resolution

Up to 32 channels

Easy set-up via installation wizard

Fast boot-up times operating system on Solid State Disk (SSD)

Pre-configuration without HDD possible due to built-in SSD with operating system

Designed for 24/7 operation
