PHILIPS

System4®
& MULTIPLEXERS

Whether it's for the neighborhood corner grocery store or a national monument, Philips' LTC 2600 Series Video Multiplexers offer a range of features, value, and ease-of-use.

Philips Video Management tools are designed to meet the specific needs of your security application. They easily integrate with our entire security product line, including AutoDomes,® monitors, and video cassette recorders. Full integration offers you a complete, easy-to-install, low-maintenance CCTV system from a single vendor.

For the largest security applications, Philips offers the Allegiant® Series Matrix Switchers, which manage up to 4096 cameras and 512 monitors in a single system.

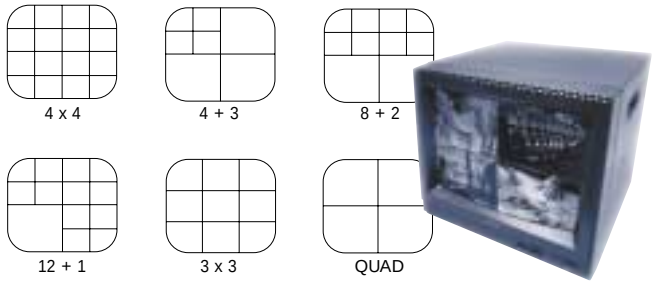

Our customer service program supports your system's operation and features immediate shipment with a three-year warranty. More options, better quality, more support — only from Philips.

Philips' *System4* video management system and our line of multiplexers enable you to decide how you want to view, record, and play back your surveillance video. These products include powerful multitasking capabilities and enhanced circuitry that eliminate annoying flicker common to multiscreen displays. Other features that make these systems the logical choice for optimal recorded images include:

- User-friendly controls for simplified programming and operation.
- Six different system setups can be preconfigured for automatic activation at a specified time — reducing the need for your operators to interact with the system.
- Cameras detecting motion receive recording priority, so the most important shots are captured.
- All units can play back video recorded on other manufacturers' equipment.
- Universal power supplies facilitate worldwide usage.

Choose from six on-screen displays to suit your application requirements.

System4 Video Management System

Control your cameras directly from a multiplexer.

- TrueTriplex Operation allows you to simultaneously record, play back recorded video and view live video in multiscreen mode.
- Works as a matrix switcher, displaying any camera on either monitor and controlling pan/tilt/zoom and VCR, along with the standard multiplexer functions.
- Log Events feature tracks event history, reducing tape viewing time when used in conjunction with Time/Date/Search.
- Optional remote keyboards offer pan/tilt/zoom control.
- Optional GUI for intuitive programming and control from a PC.
- Video Manager enables display of up to 16 mux to 6 monitor outputs.

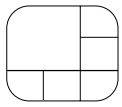

LTC 2622 *6Plex*

Bridging the gap between the *System4* and standard multiplexers in a 6-channel, color, duplex unit.

- 5+1 viewing shows alarm image in the +1 quadrant, eliminating the need for an extra monitor.
- AutoSet® start-up enables the system to automatically configure itself, eliminating most programming.
- Optional remote keyboards offer pan/tilt/zoom control.
- Camera Display Lockout prevents a selected camera from being displayed on monitors, but this hidden video is still recorded. Ideal for retail operations trying to reduce shrinkage.

On-screen display exclusive to *6Plex* units.

1 + 5

VIDEO MANAGEMENT SYSTEM SELECTION GUIDE

	CHANNELS	OPERATION	PTZ CONTROL	MODEL
COLOR	6	Duplex	Yes	LTC 2622/90
	9	Duplex	No	LTC 2642/90
	9	Triplex	Yes	LTC 2672/90
	16	Simplex	No	LTC 2661/60
	16	Duplex	No	LTC 2662/90
	16	Triplex	Yes	LTC 2682/90
MONOCHROME	9	Duplex	No	LTC 2632/90
	16	Duplex	No	LTC 2652/90

LTC 2600 Series UniversalMux, MonochromeMux and LTC 2660 (Simplex)

The ideal multiplexers to use when quality and frequency of recorded images are priorities, but pan/tilt/zoom control is not required.

- AutoSet start-up enables the system to automatically configure itself, eliminating most programming.

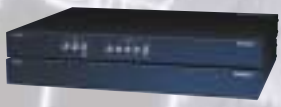

- Camera Display Lockout prevents a selected camera from being displayed on monitors, but this hidden video is still recorded.

For applications requiring digital storage, Philips has a Digital Portfolio that includes digital multiplexers/recorders.

LTC 2370 VidQuad®
Video Processors

- Basic units display up to 4 cameras on a single monitor in quad view with no user controls.
- Full-featured units have real time update rate and an output that can be set to a variety of displays. These units always record in quad mode, but recorded images can be played back full-screen. Alarm programming allows users to select options, such as control of a VCR to record only on alarm.

LTC 510x Sequential Switchers

- Microprocessor-based switchers display up to 4 or 8 cameras sequentially with roll-free viewing.
- Camera dwell time and alarm parameters can be programmed individually or as a group to customize for your application.
- On-screen status line and set-up menus facilitate operation.

LTC 5121 and LTC 5141
Economical Sequential Switchers

With 2- and 4-channel units, these switchers handle the most basic CCTV applications and include necessary features, such as adjustable dwell time and automatic skip of unused inputs. Vertical interval switching circuitry reduces picture distortion during sequencing.
