

Product Information

Date: May 28, 2013

Product: WinLoad (Upload/Download Software)

Subject: Version 5.70 release

Download: To download WinLoad V5.70, [click here*](#)
**requires login name and password to download*

Improvements: **“+” sign now accepted in the telephone number**

In the telephone number programming, before it was necessary to program the letter “T” instead of the “+” sign for dialing of a mobile number, it is not possible to use the “+” sign directly.

“0” in IP account number converted to an “A”

The WinLoad will now not allow you to enter a zero into the account number for the IP reporting, making it consistent with the landline account number programming. Entering a zero would cause the reporting to not be received correctly by the monitoring software.

Resolved Zone Tamper setting default value now correct

issues: With the previous versions, the Tamper per zone default settings were not correct, which has been resolved in this version, the default values now reflect what is in the panel.

French language properly displayed

When switching to the French language in the version 5.60, the language was not displayed, this has not been corrected.

Contact: If you require any additional information or if you have any questions, please do not hesitate to contact our Distributor Support department.
