

CMS v3.3.1 for PC:

Release notes:

1. Compatible with the new Ossia OS.
2. Automatic time synchronization with connected devices every 3 hours.
3. Under "Device management" menu, "Rec State" show local recording status.
4. Under "Device management" menu, "Online State" will show device network status. If the device is offline, click the state button to see the reason for being offline.
5. Remote reboot support for IPC. (Only when the camera is used as standalone – meaning it is not connected to any devices or software. E.g. NVR or IE WEB client)
6. Audio record support
7. "Search" function was added to the device list.
8. In case of backup failure, the software will show the exact reason instead of "unknown error".
9. Network drive support
10. Additional maps support
11. "Talk to device" feature was added to the web client
12. Additional languages support (French, German, Hungarian)
13. Minor bug fixes

Important notes:

- 1) Due to stability issues while using P2P cloud and the CMS, **the P2P cloud connection option was removed and will not be supported from this version forth. In case cloud connection is used with your current version – DO NOT upgrade to this version or any version higher than 3.3.0.**
- 2) Due to a code update made to the configuration file on this version, **please do not export the configuration data from v3.2 and import it to v3.3.x. Make sure to "keep the configuration setting" when uninstalling version 3.2 or lower.**

Please contact us for any assistance needed or for any question.

Best Regards,
Provision-ISR's Technical Team
